General Advisory:

Farmers are requested not to burn crop residue because it destroys the soil properties .

SMS Advisory:

Farmers are requested not to burn crop residue because it destroys the soil properties .

Crop Specific Advisory:

Crop Stage	Crop Specific Advisory
WHEAT (Sowing)	Sowing or Early Vegetative Stage : Farmers are requested to sow quality wheat seed upto third week of December. Seed treatment must be done with Carbendazim or Mancozeb and 5% salt water before sowing. Select the proper variety. Early varieties are : DBW-187, DBW-252 etc (upto last week of Nov). Late varieties are : DBW-107, HD-3118, DBW-316 etc. Apply sulphur, zinc, boron, molybdenum as micronutrient . 5-6 irrigations are sufficient in the entire life cycle.

Horticulture Specific Advisory:

Horticulture Stage	Horticulture Specific Advisory
POTATO (Vegetative)	Vegetative Stage: Spraying must be done to prevent blight by Copper oxychloride or Mancozeb or Propineb or Chlorothalonil with sticker in a clear, sunny day . Those who are bound to resow the crop due to depression rainfall ,use carbendazim or mancozeb for seed treatment . Visit the crop field continuously.
